### The new Motion Technology in cooperation with Centrolene

Go one step ahead and follow us into a new time line where Motion Logistics Network gives freight forwarders the two things they need to take their businesses to the next level – powerful partnerships connected by powerful technology.

The partnerships work because each member is a leader in their country and has the drive and desire to become a global player.

The technology works because Motion has recently signed a contract with our IT based partner Centrolene. The Centrolene C-Suite is the world's first fully integrated solution for the logistics industry.

It is designed by industry professionals, for industry professionals.

The newest tool will be available effective January 2018.
